

Risk - Resource Dual-Axis Dynamic Cascade Model

Stress, mediators, and suicidal ideation in a longitudinal questionnaire + EMA design (N = 391, 28,723 prompts)

DYNAMIC SUBTYPES (H6-H7) WITHIN-PERSON CASCADE (H1-H4) TRAIT MODERATORS (H5)

Path conventions:

— main path (95% CI excludes 0) — attenuated path / null -- distal effect ... individual differences lens

Hypotheses tested: H1-H3 (cascade & individual heterogeneity) · H4 (CTQ × path moderation, EA amplifies a-paths, PA attenuates b-paths) · H5 (trait moderation) · H6-H7 (subtype dissociation)
